

EXECUTIVE SUMMARY

CHANGES IN THE DISTRIBUTION OF ALASKA'S COMMERCIAL FISHERIES ENTRY PERMITS 1975 to 1997

CFEC Report Number 98-5N-EXEC
June, 1998

Alaska Commercial Fisheries Entry Commission
8800 Glacier Highway, Suite 109
Juneau, Alaska 99801
(907) 789-6160

ABSTRACT

This report provides detailed information on changes in the distribution of permanent permits in Alaska's limited fisheries. It covers the 51 fisheries for which permanent permits have been issued from 1975 through 1997. The report provides both statewide and fishery-specific data on the number of permit transfers, the geographic distribution of permit holders, changes due to transfers, changes due to migration, and the year-end 1997 geographic distribution of permit holders.

The report also includes extensive information on the age distribution of permit holders, age differences between transferors and transfer recipients, the incidence of intra-family and business partner transfers, transfer acquisition methods, and the financing of permit purchases. The information contained in the report is derived from the Commercial Fisheries Entry Commission's (CFEC) permit and transfer survey files.

The report includes two separate documents: an executive summary and the main report, which is primarily a reference document.

EXECUTIVE SUMMARY

INTRODUCTION

In 1973 the Alaska State Legislature enacted Alaska's Limited Entry Law (AS 16.43). The law established the Commercial Fisheries Entry Commission (CFEC), and charged it with administering the new program for regulating entry into the state's commercial fisheries. By the end of 1974, limited entry had been implemented in most of the state's salmon fisheries, and by the end of 1997 limited entry permits had been issued in 51 commercial fisheries: 26 salmon fisheries, 14 herring fisheries, 8 crab fisheries, and 3 sablefish fisheries.

A legal prerequisite of the Limited Entry Act was that permits could not be locked in the hands of those who were originally issued them (i.e. "initial issues").¹ After much study and debate, the legislature finally chose free transferability as the method for allowing permit holders to enter and exit the fisheries.

Free transferability allows the transfer of permits from parents to their children and allows family members to inherit a permit upon the death of the permit holder. It allows a fisherman to enter and exit fisheries at times opportune to them, and obviates the need for an expensive and time consuming bureaucratic process to handle permit reallocation. Many other transfer options were considered and were found lacking with respect to these criteria.

In 1983 the Alaska State Supreme Court decided *State of Alaska v. Ostrosky*, which challenged the also contains special sections with tables that detail transfer information on rural permit holders and

constitutionality of the Limited Entry Act, particularly the free transferability provisions. The court upheld the constitutionality of both the Act and of free transferability and also affirmed the legislative objectives of adopting the transferability option. The decision was subsequently allowed to stand by the United States Supreme Court when it dismissed the Ostrosky appeal in *Ostrosky v. State*.

Despite the benefits of free transferability, many people remain concerned that permit transfers may eventually result in undesirable consequences with regard to the distribution of permits. There is a concern that permits will leave the state, or that permits will disappear from isolated fishing communities which are local to a limited fishery, thereby eroding the economic base. Because of these concerns about free transferability, CFEC has produced this updated report so that the legislature, the administration, and other interested parties will be kept accurately apprised of the facts.

This edition of *Changes in the Distribution of Alaska's Limited Entry Permits* has been published as two separate documents. This executive summary is designed to publish tables that address the most common questions about limited entry permits and the effects of permit transfers on the geographic distribution of permit holdings. The main report is primarily a reference document and includes more detailed fishery-specific and time-series tables on the topics addressed in the executive summary. It permit holders who live locally to fisheries where they hold permits. Both the executive summary

and the reference document cover the 51 limited fisheries and 58 permit types for which permanent permits have been issued from 1975 through 1997.

TRANSFER INCIDENCE

Not all permits are available for transfer in limited entry fisheries because CFEC issues both transferable and non-transferable permits. The Limited Entry Act requires CFEC to allocate permits using hardship ranking systems, often called "point systems," which rank individuals based upon the relative hardship they would suffer if they were denied a permit. The Act also requires CFEC to determine levels within the point systems where persons would experience only minor economic hardship if excluded from the fishery. Persons who receive permanent permits and who are ranked at or below the minor economic hardship level receive non-transferable permits. From 1975 through 1997, 14,462 permanent limited entry permits had been issued in 51 fisheries: 12,766 were fully transferable,² and 1,696 were non-transferable.

Permit Transfers

During the 1975-1997 time span there were 23,523 permanent permit transfers. Original permit holders transferred 9,498 permits, indicating that approximately 74.2% of all transferable permits had changed hands at least once (9,498 out of 12,799 total permits) by the end of 1997. Over the entire period, the average annual number of transfers per number of transferable permits was 9.3% (23,523 total transfers / 254,079 transferable permit-years).

Transfer Rates

Two types of annual transfer rates are shown in Table 1. The first type is the ratio of permits transferred for the first time (i.e. from initial issuees) to the number of transferable permits. This ratio would be expected to decline over time

if no new permits were issued because each year there would be fewer permits held by initial issuees left to transfer. This transfer ratio has declined from .08 to .02 over the 1975-1997 period. Over this same period, the average annual ratio of transfers from initial issuees to transferable permit years is .04.

The second type of annual transfer rate reported in Table 1 is the ratio of transfers to available transferable permits, which provides a measure of the annual turnover rate for transferable permits. This ratio varied between .07 and .13 over the 1975-1997 time period, and averaged over .09 for all years combined.³ As can be seen in Table 1, this transfer ratio dropped below the all-years average in 1989 and has remained relatively low through 1997. The 1993 and 1994 ratios of .07 indicate the lowest turnover rates recorded over the time period.

TABLE 1. Statewide Transfer Data on Permanent Permits, by Year, 1975 - 1997

Year	Number of Permanent Permits *	Number of Transferable Permits *	Yearly # of Transfers From Initial Issuees	Ratio of Transfers From Initial Issuees to Transferable Permits	Yearly Number of Transfers **	Ratio of Transfers to Transferable Permits
1975	6,762	6,762	568	0.08	590	0.09
1976	9,173	9,160	650	0.07	776	0.08
1977	9,772	9,710	780	0.08	1,108	0.11
1978	9,975	9,895	777	0.08	1,314	0.13

1993	13,423	12,429	216	0.02	856	0.07
1994	13,404	12,460	217	0.02	908	0.07
1995	13,357	12,461	232	0.02	1,010	0.08
1996	13,347	12,492	228	0.02	941	0.08
1997	13,639	12,799	262	0.02	961	0.08

Years	Number of Transferable Permit-Years	Total Transfers From Initial Issuees	Ratio	Total Number of Transfers	Ratio
1975-97	254,079	9,498	0.04	23,523	0.09

* 858 permits have been revoked. Except for 35 that were re-instated, these have been excluded from the year of revoke forward.

** The number of transfers includes 132 loan foreclosures by the Department of Commerce and Economic Development or by the Commercial Fishing and Agriculture Bank, and 121 subsequent transfers from these entities.

GEOGRAPHIC DISTRIBUTION OF PERMITS, TRANSFERS, AND MIGRATIONS

Classification of Permit Holders

This report measures changes in permit distribution by classifying permit holders based upon where they reside. Five resident types have been defined. Permit holders who reside in Alaska are classified into "rural" or "urban" and "local" or "nonlocal" groups. Nonresidents are classified into a single category. The resident types and their acronyms are listed below:

ARL: *Alaska* resident of a *Rural* community which is *Local* to the fishery for which the permit applies;

ARN: *Alaska* resident of a *Rural* community which is *Nonlocal* to the fishery for which the permit applies ;

AUL: *Alaska* resident of an *Urban* community which is *Local* to the fishery for which the permit applies;⁴

AUN: *Alaska* resident of an *Urban* community which is *Nonlocal* to the fishery for which the permit applies;

N: *Nonresident* of Alaska;

DCED: Signifies permits which have been foreclosed upon by the Alaska State Department of Commerce and Economic Development (DCED) or by the Commercial Fishing and Agriculture Bank (CFAB) and have yet to be transferred.

An example of how this classification works could be a permit holder who lives in Dillingham and holds two limited entry permits. If one permit is for the Bristol Bay drift gill net fishery, that permit will be classified as one held by an Alaska Rural Local because Dillingham is a rural community and is local to Bristol Bay. If he also holds a Southeast sac roe herring gill net permit, his permit for that fishery will be classified as one held by an Alaska Rural Non-local because Dillingham is not local to Southeast Alaska.

Changes in the Distribution of Permits

Table 2 provides summary information on the initial issuance and changes in permit holdings for the assigned resident classes. Between 1975 and the end of 1997, 14,462 permanent permits were issued in Alaska's limited fisheries. Alaska residents received 81.7% of these permits (11,818 permits), and Nonresidents received 18.3% (2,644 permits). Almost half of all permits issued (46.4%) were to Alaska Rural Locals, and 26.2% were issued to Alaska Urban Locals. The remaining permits issued to Alaskans were divided between the Alaska Rural and Urban Nonlocal resident types.

The number of permits held by each resident type can change for three reasons: permits can be transferred to other resident types, permit holders can simply move from one locale to another (migration), or permits may be revoked.

TABLE 2.

Initial issuance, overall net changes due to transfers, migrations, and revocations, and year-end 1997 totals of permanent limited entry permits, by resident type.

Residency Category	Total Initial Issuance (%)	----- Net Change (%) -----						Total 1997 Year-End (%)
		Transfers	Migration	Revoked	Total Change			
AK Rural Local	6,714 (46.4)	-723 (-10.8)	-371 (-5.5)	-209 (-3.1)	-1,303 (-19.4)		5,411 (39.7)	
AK Rural Non-local	379 (2.6)	36 (9.5)	17 (4.5)	-8 (-2.1)	45 (11.9)		424 (3.1)	
AK Urban Local	3,791 (26.2)	80 (2.1)	-196 (-5.2)	-420 (-11.1)	-536 (-14.2)		3,255 (23.9)	
AK Urban Non-local	934 (6.5)	414 (44.3)	124 (13.3)	-58 (-6.2)	480 (51.4)		1,414 (10.4)	
Nonresident	2,644 (18.3)	182 (6.9)	426 (16.1)	-128 (-4.8)	480 (18.2)		3,124 (22.9)	
DCED or CFAB	0	11	0	0	11		11 (0.08)	
Totals	14,462 (100.0)	0	0	-823	-823		13,639 (100.0)	

By the end of 1997 the total number of permits had decreased to 13,639 due to the revocation of 695 Alaskan permits and 128 Nonresident permits. Note that 11 permits had been foreclosed upon by the Alaska Department of Commerce and Economic Development (DCED) or the Commercial Fishing and Agriculture Bank (CFAB) and had yet to be transferred.

Revocation normally occurs on nontransferable permits when a permit holder dies or does not renew the permit. Most of the revoked permits came from the hand troll fishery (703, or 85.4% of the total) (Tables 3 and 4), where a large number of nontransferable entry permits were issued.

When the effects of revocation, transfer, and migration were combined at the end of 1997,

Alaska residents held 10,515 permits (77.1%) (including 11 permits held by DCED or CFAB) and Nonresidents held 3,124 permits (22.9%).

Alaska permit decreases are countered by Nonresident permit increases. Migration, rather than transfer, has had a greater cumulative effect on the Resident/Nonresident balance. By the end of 1997, the number of permits held by Nonresidents had increased by 182 from the net result of transfer activity and by 426 from the net result of migratory activity.

The overall decline of 1,303 permits held by Alaska Rural Locals represents 19.4% of all transferable and nontransferable permits

originally issued to them. Transfer activities accounted for 55.5% of this decrease (723 permits). The largest net decreases occurred during the 1977 through 1986 time period and have become much smaller since then.

Tables 3 and 4 show permit distribution at initial issuance and the end of 1997 for the 51 fisheries and 58 permit types where limited entry permits have been issued. Tables 5 and 6 show the net effects of transfer and migration for those same fisheries. Table 7 shows the annual effects of transfer, migration, and revocations over all fisheries for the five resident types.

Some of the more noteworthy changes indicated by the tables are:

- ◆ Transfer activity resulted in a decrease of permits held by Alaska Rural Locals in about one-half of the listed permit types. Fifty-two percent of this net decrease can be attributed to transfers in the Bristol Bay drift (217 permits) and set gill net (159 permits) fisheries.
- ◆ Alaska residents who moved out of state brought about a net increase of 426 Nonresident permits in thirty-five separate permit types, especially in the Bristol Bay salmon fisheries, the Kodiak purse seine and set net salmon fisheries, the Cook Inlet salmon fisheries, and the hand troll fishery.

Transfer activity increased the number of permits held by Nonresidents in 19 permit types, and resulted in net losses in 20 permit types. Some fisheries in particular show large gains in permits transferred to Nonresidents, particularly the Bristol Bay salmon fisheries, the Cook Inlet salmon set net fishery, and the hand troll fishery.

- ◆ Alaska Urban Locals show a total decrease of 536 permits from initial issuance through 1997.

Revocations of permits have accounted for 78.4% of this decrease. Most of the revocations of AUL-held permits have been in the hand troll fishery and were due to either the death of a nontransferable permit holder or the forfeiture of permits for nonpayment of permit renewal fees.

- ◆ Alaska Urban Non-locals show net increases in 30 permit types due to transfer, and in 26 permit types due to migration over the 1975-1997 time period. During the same time period 58 Alaska Urban Non-local permits were revoked, resulting in a cumulative net gain of 480 permits. This is a 51.4% gain in the number of permits originally issued to this resident group.
- ◆ Alaska Rural Non-locals are the smallest resident group. They recorded an overall net gain in permits, especially through migration in the Arctic / Yukon / Kuskokwim salmon fisheries, and through transfers mainly in the Peninsula/Aleutians salmon drift net fishery and the Norton Sound herring gill net fishery.

AGE PATTERNS AMONG PERMIT HOLDERS

Figure 1 shows the annual mean ages of transferors, transfer recipients, and all permit holders. The statewide mean age of transferable permit holders decreased from 43 years in 1975 to 41 years in 1977 and remained at about that level through 1985. The mean age has increased

slightly each year since then and by the end of 1997 it had risen to more than 45 years. The increased mean age of transferable permit holders observed in recent years may be related to reduced transfer activity as well as an increased mean age of transferors and transfer recipients.

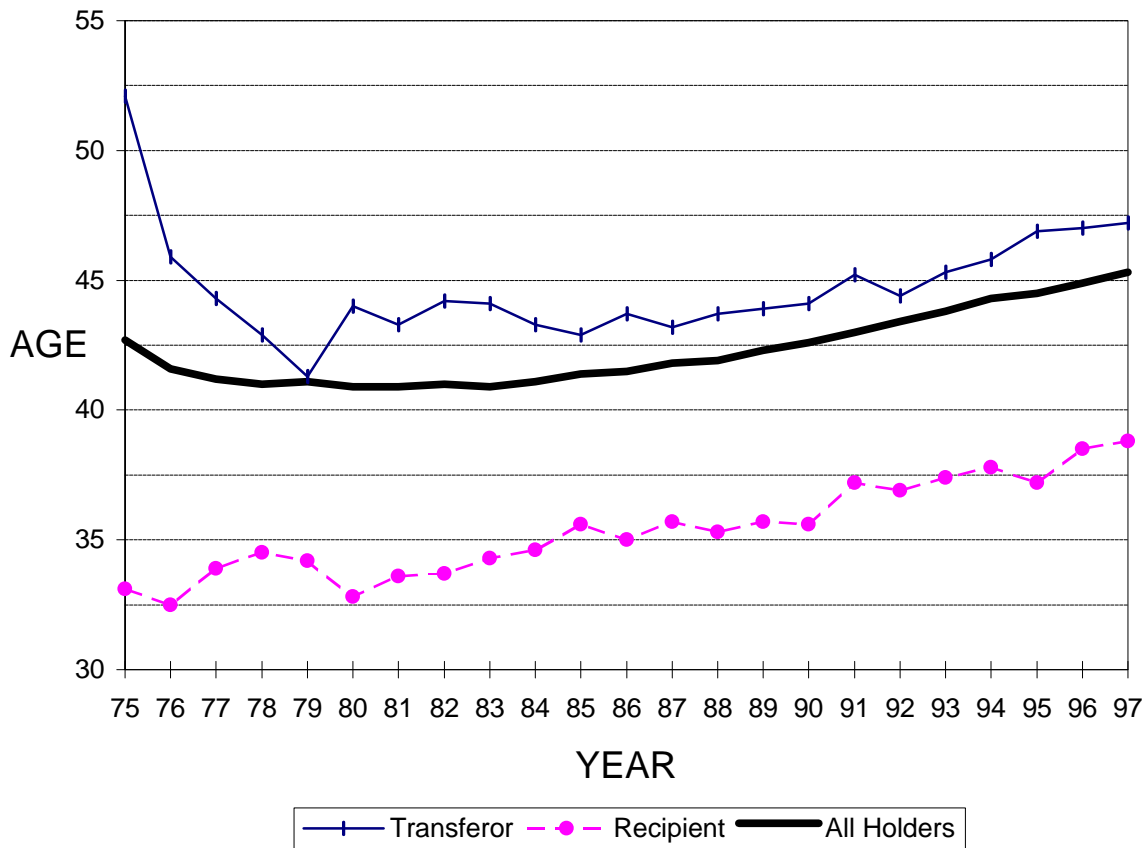

Figure 1. Mean ages of permit holders of transferable limited entry permits: transferors, transfer recipients, and all permit holders.

TRANSFER SURVEY RESULTS

When limited entry permits are transferred, CFEC conducts a survey of the transfer participants. The survey collects information on the relationship between transfer parties; whether the transfer was a gift, sale, trade, or inheritance; and, for sale transfers, the sale price and the type of financing used. The survey has served as the source of information for CFEC's estimates of permit values, which are used to make fishing loans by the State Department of Commerce and Economic Development and the Alaska Commercial Fishing and Agriculture Bank.

It has been mandatory for the transfer recipient to complete the survey since 1980. Survey results from the 1980-1997 time period are presented in both this summary and in the main report.

Strict enforcement of the mandatory survey did not occur until 1981. There were 139 transfers in 1980 and 15 transfers in 1981 without completed surveys. Note that in every year some transfers occur and no transfer survey is completed for them, which accounts for the slight differences in the "Totals" columns between Table 1 and the other tables in this chapter. The majority of

	3,497 (20.0%)	6,189 (33.9%)	920 (5.0%)	7,473 (41.0%)	18,230 (100.0%)

* Transfer survey information is not included for 132 permit foreclosures. However, subsequent transfers of 121 of these permits are included in the "other" category.

** This total includes surveys in which the relationship was not indicated.

transfers without surveys occur on foreclosed permits. Overall, the surveys represent 98.4% of all transfers since 1980 (18,230 of 18,526 transfers).

Relationships of Transfer Participants

Most permits are transferred between people who know one another. Table 8 shows that of the 18,230 transfer surveys received from 1980 to 1997, 38.9% indicated a transfer between immediate family members or other relatives and 20.0% indicated a transfer between friends or business partners. Permit exchanges between people who appeared to have no pre-existing relationship accounted for the remaining 41.0% of the transfers.⁶

The percentage of transfers between friends and business partners began decreasing in 1983. The

rewording of the ‘Friend’ category on the survey form to ‘Personal Friend’ in October 1983 may be responsible for part of this decrease. It may also account for the relatively sharp increase in the number of transfers between persons in the ‘Other’ category in 1984.

Relationships of Transfer Participants, By Residency

The relationship between transferors and transfer recipients varies considerably between resident types. (Figure 2) Over half (58.2%) of the transfers to Alaska Rural Locals, for all years combined, were from immediate family members or relatives, which is roughly double that of any other resident type. In the remaining resident types, the “Other” category predominated.

Figure 2. Transfers to the Resident Type: Relationship Between the Transferor and the Permit Recipient

Permit Acquisition Method: Gift, Sale, Trade, and Other

Under the Limited Entry Act's terms of free transferability, permits may be sold, traded, given away, or inherited. During the 1980-1997 period, 59.9% of all transfers were sales, 34.6% were gifts, and 1.7% were trades. The remaining 700 transfers in the 'Other' category comprised 3.8% of the survey responses. (Table 9)

The incidence of gift transactions has accounted for roughly 30-40% of all transfers since 1980.

Because gifts accounted for only 21.5% of all transfer survey responses in the 1975-1979 period,⁷ it has been suggested that the 1980-1997 percentage increase may be a result of regulatory attempts to enforce the Limited Entry Act's prohibitions against leasing permits. Therefore, some of the 'Gift' responses may actually represent lease arrangements or carry reciprocal expectations.

The highest volume and percentage of sales transfers were from 1985 through 1988.

TABLE 9. Transfer Acquisition Methods, All Fisheries by Year (from 1980-1997 survey data)*

Year	Gift	Sale	Trade	Other	Total

	6,301 (34.6%)	10,913 (59.9%)	314 (1.7%)	700 (3.8%)	18,230 (100.0%)

* Transfer survey information is not included for 132 permit foreclosures, however, 121 subsequent transfers of these permits are included in the "other" category.

** This total includes survey/s in which the acquisition method was not indicated.

Individual fisheries often differ considerably from the statewide averages. Tables in the main document of this report show that while sale transactions predominated in most fisheries, gifts represented at least half of the 1980-1997 survey responses in ten fisheries. These fisheries (with 4 or more transfers through 1997) were the Lower Yukon herring gill net (89.7%), Cook Inlet Dungeness Pot (75.0%), the Nelson Island herring gill net (72.7%), the Kuskokwim salmon gill net (68.8%), the Lower Yukon salmon gill net (63.7%), the Kotzebue salmon gill net (61.5%), the Bristol Bay herring spawn-on-kelp (61.5%), the Alaska Peninsula salmon seine (61.0%), the Kodiak salmon set net (55.2%) and the Norton Sound salmon gill net (55.2%) fisheries.

Fisheries with lower permit values tend to have higher proportions of gift transactions. Some notable exceptions are the Peninsula/Aleutian and

Chignik salmon seine fisheries (high percentage of gifts and high permit values), and the salmon hand troll fishery (low percentage of gifts and a low permit value). (Tables 18 and 20, main report)

Acquisition Methods by Residency

Figure 3 shows a breakdown of acquisition methods by the resident type of the transfer recipient. Since 1980 51.8% of Alaska Rural Locals who have obtained permits through transfer have received them as gifts. Sales have accounted for the majority of the transfers to each of the other resident types over the time period.

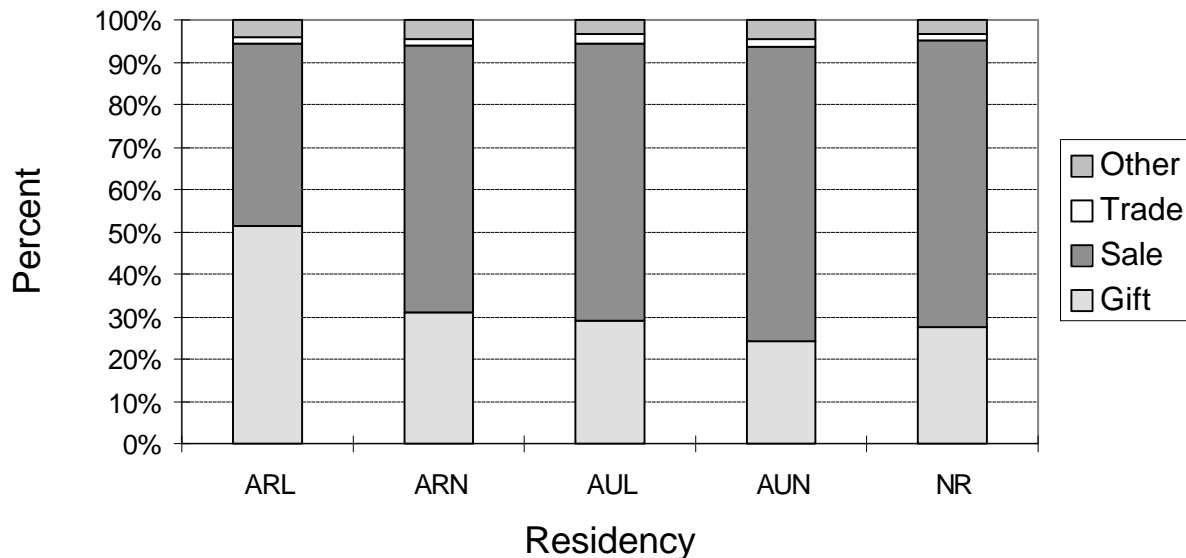

Figure 3. 1980-1997 permit acquisition methods, by residency

Financing of Permit Purchases

The transfer survey indicates the predominate means of financing for permit purchases has been through self-financing, which was used for 57.5% of all purchases during the 1980-1997 time period. The next most important source of financing has been the Department of Commerce and Economic Development's loan program with 18.8%.⁸ The remainder of the financing sources come from transferors, banks and other private lending institutions, the Commercial Fishing and Agriculture Bank, and processors.

Both the percentage and the number of permit sales financed by the transferor have declined significantly since 1980 (Table 10). In 1980, 142 transfers were financed by the seller (27.7%); in 1997 only 4 transfers were seller-financed (.7%). The percentage of self-financed purchases has tended to increase over the time period and the percentage of sales financed by the state Dept. of Commerce has declined somewhat since the mid-1980's.

TABLE 10. Sources of Permit Financing, All Fisheries by Year (from 1980-1997 survey data)*

Year	Self/Other	Bank	DCED	CFAB	Transferor	Processor	Combination	Total

1992	366 (68.2%)	37 (6.9%)	59 (11.0%)	24 (4.5%)	29 (5.4%)	14 (2.6%)	8 (1.5%)	537 (100.0%)
1993	263 (59.0%)	20 (4.5%)	87 (19.5%)	12 (2.7%)	44 (9.9%)	10 (2.2%)	10 (2.2%)	446 (100.0%)
1994	332 (66.4%)	35 (7.0%)	66 (13.2%)	9 (1.8%)	40 (8.0%)	12 (2.4%)	6 (1.2%)	500 (100.0%)
1995	386 (63.6%)	47 (7.7%)	91 (15.0%)	18 (3.0%)	12 (2.0%)	13 (2.1%)	37 (6.1%)	607 (99.5%)
1996	361 (66.7%)	32 (5.9%)	86 (15.9%)	12 (2.2%)	2 (0.4%)	12 (2.2%)	36 (6.7%)	541 (100.0%)
1997	379 (64.9%)	40 (6.8%)	96 (16.4%)	12 (2.1%)	4 (0.7%)	6 (1.0%)	47 (8.0%)	584 (100.0%)
	6,277 (57.5%)	839 (7.7%)	2,053 (18.8%)	269 (2.5%)	1,121 (10.3%)	152 (1.4%)	202 (1.9%)	10,913 (100.0%)

* This table includes only those surveys where respondents indicated that they had purchased their permit.

Fishery-specific tables in the main report indicate that many individual fisheries deviate from the statewide percentages. For example, fisheries in which the all years' percentages of self-financed permits are higher than the statewide percentage tend to be those with lower permit values, especially the hand troll fishery (87.6% or 1,071 purchases) and the six Arctic / Yukon / Kuskokwim salmon fisheries, which ranged between 70.8% and 84.6%.

State-financed loans were the principal means of financing in several fisheries: the Southeast and Prince William Sound roe herring seine (47.1% and 40.8%, respectively) and Chignik and Cook Inlet salmon seine (39.1% and 45.3%, respectively) fisheries. The Southeast king and Tanner crab fisheries also show indications of

high use of state financing, but the fisheries have recorded only a limited number of sale transactions to date.

Permit Financing by Residency

Table 11 provides information on the sources of permit financing by resident type over the entire 1980 to 1997 time period. Alaska residents most commonly used their personal resources and the State of Alaska authorized loans as a means for financing the 7,571 permits purchased since 1980. Urban Alaska residents have received two-thirds (1,350 of 2,041) of the state loans. Nonresidents have the highest rates of self-financing (69.8%) and of financing through the transferor(14.9%).

TABLE 11. Sources of Permit Financing By Resident Type of Transfer Recipient (from 1980-1997 survey data)*

Resident Type	Self/Other	Bank	DCED	CFAB	Transferor	Processor	Combination	Total

* This table includes only those cases where survey respondents indicated they had purchased their permit.

Permit Prices

Table 12 shows mean and median permit prices by permit type and year for sales that occurred over the 1980 to 1997 period. If the surveys indicated permit prices of less than \$500, they have been excluded from the computations.⁹ To preserve confidentiality, price statistics are not shown if there are less than four sales transactions in a permit type/year combination; also no value will be reported for a permit/year if there were no sale transactions for that permit. All the prices are in nominal dollars and do not reflect adjustments for general price inflation. Generally, nominal permit prices of individual fisheries over the 1980-1997 period have tended to increase through 1990, then fall from 1991 to 1997, especially in the salmon fisheries, although permit prices have remained fairly stable in the Arctic/Yukon/Kuskokwim salmon fisheries.

** Footnotes:*

Because permit prices of less than \$500 are excluded, average permit values in this table will vary somewhat from those reported in CFEC Annual Reports, which use different exclusionary criteria.

All instances where there are less than four transactions are masked due to confidentiality statutes.

Transfer survey information for Department of Commerce foreclosures are also excluded, however transfers from the Dept of Commerce to other Alaskans are included.

Footnotes:

1. Note that initial issuance refers to the issuance of a new permit *whenever* this occurred. Because some applicants are difficult to classify under a hardship ranking system, a final determination of their standing may come only after an extensive hearing and adjudicatory process. In other instances permits have been issued as lawsuits brought against the Commission are eventually resolved. Therefore, some permits have been issued several years after the main body of permits were issued in a given fishery.
2. Although 12,766 transferable permits were initially issued (Table 3), the actual number of transferable permits at the end of 1997 was 12,799 (Tables 1 and 4). These totals differ because 96 transferable permits were revoked and 129 nontransferable permits were reclassified as transferable after receiving additional point awards through adjudications.
3. Because some permits may be transferred more than once during a year, the ratio of permits transferred to available transferable permits would be slightly less.
4. The Alaska Urban Local category is not applicable for several fisheries which have no local urban communities. These fisheries are the Yakutat set net, Chignik seine, Bristol Bay salmon drift and set net and herring spawn on kelp, Lower Yukon salmon and herring gill net, and Nelson and Nunivak Island herring gill net fisheries.
5. See CFEC *Changes in the Distribution of Permit Ownership in Alaska's Limited Fisheries, 1975-1981*, February 1983.
6. If no transfers have occurred in a particular fishery, that fishery will not be shown on the table.
7. See CFEC *Changes in the Distribution of Permit Ownership in Alaska's Limited Fisheries, 1975-1981*, February 1983.
8. The percentage of State-financed permits increases to 27.2% when only the purchases by Alaska residents are considered (Table 12).
9. Permit price estimates produced for this report may differ from the CFEC monthly permit value report due to the more stringent exclusion criteria used for the monthly report.
