

#### **IV. AGE PATTERNS AMONG PERMIT HOLDERS**

A concern of the drafters of the Limited Entry Act was that limited fisheries would remain accessible to younger Alaskans. This section examines ages of yearend permit holders, transferors, and transferees over the 1975-1998 time period. Excluded from the data are nontransferable permits and permits which were foreclosed upon by the Department of Commerce and Economic Development or the Commercial Fishing and Agriculture Bank.

Yearly mean ages for all transferable permit holders, transferors and transferees are shown in Table 11. If no permits were transferred at all, the mean age of permit holders would logically increase by one year each year. However, the mean age actually declined from about 43 in 1975 to 41 in 1977 and continued at approximately that level through 1986. The mean age then began to slowly increase to 46 years at yearend 1998. There are at least two possible explanations for this increase. There have been fewer transfers in recent years (and therefore less influence from younger people entering the fisheries), and the average age of the transferees has increased.

During the 1975-1983 period, the statewide annual mean age of transferees was consistently between 32 and 34 years. Beginning in 1984 the annual mean age of transferees rose to approximately 35 years and has gradually increased since then. The oldest mean transferee age in the series was 39 in 1998.

The statewide annual mean age of transferors was highest in 1975 at 51 years, shortly after the first limited entry permits were issued. It then declined to 41 years by 1979, then rose to stay in the range of 43 to 44 years from 1980 to 1990. Since then, the annual transferor mean age has gradually increased to 48 years in 1998.

Overall, the age difference between transferors and transferees was greatest in the early years of the limited entry program, particularly prior to 1978. From 1984 to 1994 the overall age difference has not varied much and has varied between 7 and 9 years. In 1995 the age difference between transferors and transferees increased to just under 10 years, the highest level since 1983. In 1998 the difference was 9 years.

Annual mean ages for yearend permit holders, transferors and transferees in specific fisheries are presented in Table 12. At yearend 1998, the fisheries with some of the highest mean ages of yearend permit holders were the Southeast herring seine (53 years), the Norton Sound herring beach seine (53 years), the Upper Yukon gillnet fisheries (55 years), and the Southeast power troll (52 years) and hand troll (50 years) fisheries.

The Bristol Bay herring spawn on kelp (39 years) was the only fishery with a yearend 1998 mean permit holder age of less than 40.

The annual mean age for yearend permit holders, transferors, and transferees is presented in Table 13 by resident type. The highest mean age for yearend permit holders in 1998 was for Nonresidents and Alaska Urban Locals (47 years) and the lowest was for Alaska Rural Locals and Alaska Urban Nonlocals (45 years).

In 1998, Alaska Urban Nonlocals had the lowest (45 years) mean age of transferors. The remaining resident types had a mean age of transferor between 47 and 50 years. Generally, the annual mean ages of permit holders for each resident type paralleled the ages of all permit holders; that is, a relatively high average age in 1975, followed by years of decreasing average age, then a gradual increase beginning in the early 1980s and continuing through 1998.

Annual mean ages of transferees have also gradually increased within each resident type. Nonresident transferees tended to be a little older (34 to 41 years) and Alaska Rural Local transferees a little younger (29 to 37 years). Since 1975 Alaska Rural Locals and Alaska Rural Nonlocals tended to be the youngest recipients of transferred permits. The mean ages of transferees for the remaining Alaska resident types ranged between 31 and 39 years. At yearend 1998, Nonresidents had the highest mean age of transferees (41 years) and Alaska Rural Nonlocals had the lowest (36 years).

The annual age class distributions of yearend transferable permit holders are shown in more detail in Table 14. The figures in parentheses indicate the yearly percent each age class represents of all transferable permits held by a particular resident type (i.e., a row percentage). The percentage of permit holders in the 21 to 30 year old and 31 to 40 year old categories appears to be generally

decreasing with time for most of the resident types. The decrease was balanced by an increase in the percentage of permit holders in the 41 to 50 year old, the 51-60 year old, and over 60 year old categories, and was probably related to fewer transfers in recent years and the increase in the average age of transferees. Mean ages by resident type by year are provided for specific fisheries in Table 15.

TABLE 11. Mean Ages of Transferable Permit Holders, Transferors, Transferees, and Mean Age Differences Between Transferors and Transferees, by Year.

Year	Transferable Permits*	Mean Age	Number of Transfers*	Transferor Mean Age**	Transferee Mean Age	Mean Age Difference
1975	6762	42.6	590	51.0	33.0	-18.0

\* The number of transferable permits and the number of transfers exclude foreclosed permits.  
Mean ages may be based on fewer observations than the number of permits because of missing birthday information.

\*\* Age information is confidential when there are fewer than four permits.

TABLE 13. Mean Ages of Transferable Permit Holders, Transferors, and Transferees by Resident Type, 1975-1998.\*

Resident Type	Year	Transferable Permits		Transferors		Transferees	
		Count	Mean Age	Count	Mean Age	Count	Mean Age
Nonresident	1975	1955	45.9	260	55.7	201	35.1
